

# Contents

<b>1</b>	<b>Fundamentals</b>	<b>5</b>
1.1	Introduction . . . . .	5
1.1.1	Organisational issues . . . . .	5
1.1.2	Scope of this course . . . . .	5
1.1.3	What is data analysis? . . . . .	6
1.1.4	Role of data analysis in science . . . . .	7
1.1.5	Role of data analysis in every-day life . . . . .	8
1.1.6	Literature . . . . .	8
1.2	Probability . . . . .	9
1.2.1	Definition . . . . .	9
1.2.2	Probability mass function . . . . .	9
1.2.3	Probability density function . . . . .	9
1.2.4	Notation issues . . . . .	10
1.2.5	Cumulative distribution function and characteristic function . . . . .	10
1.2.6	Interpretation of probabilities . . . . .	10
1.3	Conditional probability and Bayes' theorem . . . . .	11
1.3.1	Conditional probability . . . . .	11
1.3.2	Marginalisation . . . . .	11
1.3.3	Bayes' theorem and Bayesian statistics . . . . .	12
1.3.4	Bayesian evidence . . . . .	13
1.3.5	Bayesians vs. Frequentists . . . . .	14
1.3.6	Choice of prior distributions . . . . .	15
1.4	Curse of dimensionality . . . . .	16
1.5	Fitting a straight line . . . . .	17
1.5.1	Setting the stage . . . . .	17
1.5.2	Constructing the likelihood function . . . . .	17
1.5.3	Likelihood principle . . . . .	18
1.5.4	Likelihood maximisation . . . . .	19
1.5.5	Posterior maximisation . . . . .	20
1.5.6	Real data . . . . .	20
1.6	Outlook . . . . .	22
<b>2</b>	<b>Regression I</b>	<b>23</b>
2.1	Definition of "regression" . . . . .	23
2.2	Simple examples . . . . .	23
2.2.1	Estimating a mean with Gaussian errors . . . . .	23
2.2.2	Estimating a mean with Poisson errors . . . . .	25
2.2.3	Estimating a fraction . . . . .	26
2.3	Central Limit Theorem . . . . .	26
2.3.1	Taylor expansion of log-posterior . . . . .	26

2.3.2	Application: Fisher matrix . . . . .	27
2.4	Generalised linear models . . . . .	28
2.4.1	Linear models . . . . .	28
2.4.2	Exponential-family distributions . . . . .	28
2.4.3	Generalisation of linear models . . . . .	30
2.4.4	Global likelihood maximum . . . . .	30
2.4.5	Salpeter stellar mass function . . . . .	31
2.5	Summary: Where are we? . . . . .	33
<b>3</b>	<b>Regression II</b>	<b>35</b>
3.1	Nonlinear models . . . . .	35
3.2	Regression under constraints . . . . .	36
3.2.1	Constraints vs. priors . . . . .	36
3.2.2	Salpeter stellar mass function revisited . . . . .	37
3.2.3	Linear regression on a plane . . . . .	38
3.2.4	Regression under positivity constraints . . . . .	40
3.3	Limitation of classical regression . . . . .	41
<b>4</b>	<b>Numerical methods</b>	<b>43</b>
4.1	Monte-Carlo sampling . . . . .	43
4.1.1	Numerical integration . . . . .	43
4.1.2	Sampling from the cumulative distribution . . . . .	44
4.1.3	Built-in samplers . . . . .	45
4.1.4	Rejection sampling . . . . .	46
4.1.5	Importance sampling for integration . . . . .	47
4.2	Simple optimisation algorithms . . . . .	48
4.2.1	Brute-force grids . . . . .	48
4.2.2	Gradient descent . . . . .	48
4.2.3	Newton's method . . . . .	49
4.2.4	Schechter galaxy luminosity function . . . . .	50
4.3	Advanced optimisation algorithms . . . . .	51
4.3.1	Metropolis-Hastings . . . . .	51
4.3.2	EMCEE . . . . .	53
4.3.3	Other MCMC algorithms . . . . .	54
4.4	Efficient optimisation algorithms . . . . .	55
4.4.1	Big Data . . . . .	55
4.4.2	Stochastic gradient ascent . . . . .	55
4.4.3	Stochastic EMCEE . . . . .	57
4.5	Summary: Where are we? . . . . .	57
<b>5</b>	<b>Model comparison</b>	<b>59</b>
5.1	Underfitting and overfitting . . . . .	59
5.1.1	Generalisation error . . . . .	59
5.1.2	Under- and overfitting in parameter estimation . . . . .	60
5.1.3	Under- and overfitting and model complexity . . . . .	61
5.1.4	How to handle overfitting . . . . .	62
5.1.5	Bias-variance decomposition . . . . .	62
5.2	Cross validation . . . . .	63
5.3	Bayesian model comparison . . . . .	64
5.3.1	Bayesian evidence and goodness-of-fit . . . . .	64
5.3.2	Bayes factors . . . . .	64

5.3.3	Analytic evidence for linear models . . . . .	65
5.3.4	Connection between AGN and galaxy merging . . . . .	67
5.3.5	Estimating evidence numerically . . . . .	68
5.3.6	Robust and efficient evidence estimation from MCMC . . . . .	70
5.4	The failure of Frequentist model assessment . . . . .	72
5.4.1	Orthodox hypothesis testing . . . . .	72
5.4.2	Reduced $\chi^2$ . . . . .	73
5.4.3	$\chi^2$ -test as an example of $p$ -values . . . . .	74
5.4.4	Problems of $p$ -values . . . . .	75
5.4.5	Demonstration with toy data . . . . .	76
5.4.6	Discussion with regard to Gliese 581 . . . . .	76
5.5	Predicting data . . . . .	77
5.5.1	Single-model prediction . . . . .	77
5.5.2	Multi-model prediction . . . . .	78
5.6	Summary: Where are we? . . . . .	79
<b>6</b>	<b>Classification</b>	<b>81</b>
6.1	About classification . . . . .	81
6.1.1	Classification in astronomy . . . . .	81
6.1.2	Supervised vs. unsupervised learning . . . . .	81
6.2	Perceptron classifier and logistic regression . . . . .	82
6.2.1	Motivation . . . . .	82
6.2.2	The perceptron classifier . . . . .	82
6.2.3	The logistic regression classifier . . . . .	83
6.2.4	Gradient and Hessian of logistic regression . . . . .	83
6.3	Neural networks . . . . .	84
6.3.1	Perceptron networks . . . . .	84
6.3.2	Building neural networks . . . . .	86
6.3.3	Predictions from neural networks . . . . .	87
6.3.4	Training neural networks . . . . .	88
6.3.5	Problems of neural networks . . . . .	89
6.4	Other modern classification algorithms . . . . .	90
6.4.1	Nearest-neighbour in high dimensions . . . . .	91
6.5	Unsupervised classification . . . . .	92
6.5.1	$K$ -means clustering . . . . .	92
6.5.2	Other unsupervised learning algorithms . . . . .	93
6.5.3	Practical problems . . . . .	93
6.6	Summary: What have we learned? . . . . .	94
<b>7</b>	<b>Learning Theory</b>	<b>95</b>
7.1	What Learning Theory is about . . . . .	95
7.2	The learning problem . . . . .	96
7.2.1	Ingredients . . . . .	96
7.2.2	Risk functional and its special cases . . . . .	96
7.2.3	Empirical risk minimisation . . . . .	97
7.2.4	Questions for Learning Theory . . . . .	98
7.3	Learning Theory in a nutshell . . . . .	98
7.3.1	Milestones of Learning Theory . . . . .	98
7.3.2	VC dimension . . . . .	98
7.3.3	Fast convergence . . . . .	99

7.3.4	Evaluating the VC dimension . . . . .	100
7.4	Structural risk minimisation . . . . .	102
7.4.1	Training error and generalisation . . . . .	102
7.4.2	Sets of functions with structure . . . . .	103
7.4.3	Maximum-margin classifier . . . . .	103
7.4.4	Support Vector Machine . . . . .	105
